

WPQ 6706 (2025) table 1: New Zealand clients with New Zealand Superannuation or Veteran's Pension ported to the Cook Islands as at the end of January 2025, by pension type, and duration of payments in the Cook Islands.

	Duration									Total
	< 3 months	3-6 months	6-12 months	1-2 years	2-4 years	4-6 years	6-8 years	8-10 years	Over 10 years	
New Zealand Super-annuation	9	30	57	90	162	165	135	45	99	795
Veteran's Pension	0	0	0	0	0	3	0	3	3	3
Total	9	30	57	87	165	168	135	45	99	798

Notes:

- Ported duration is the time from the commencement date to the date of the data extraction.
- Periods when the benefit is in suspension and then resumed without cancellation are included in the duration.
- To protect confidentiality the Ministry of Social Development uses processes to make it difficult to identify an individual person or entity from published data.
- These data tables have had random rounding to base three applied to all cell counts in the table.
- Random rounding does not round down to zero, a value of one or two will be rounded to three.
- The impact of applying random rounding is that columns and rows may not add exactly to the given column or row totals.
- The published counts will never differ by more than two counts.

WPQ 6706 (2025) table 2: New Zealand clients with New Zealand Superannuation or Veteran's Pension ported to the Cook Islands as at the end of January 2025, by average and median weeks duration of portability.

Pension type		Duration	
		Average Weeks	Median Weeks
	New Zealand Superannuation	285.0	243.0
	Veteran's Pension	433.2	452.0
	Total	285.9	244.0

Notes:

- Ported duration is the time from the commencement date to the date of the data extraction.
- Periods when the benefit is in suspension and then resumed without cancellation are included in the duration.
- To protect confidentiality the Ministry of Social Development uses processes to make it difficult to identify an individual person or entity from published data.
- These data tables have had random rounding to base three applied to all cell counts in the table.
- Random rounding does not round down to zero, a value of one or two will be rounded to three.
- The impact of applying random rounding is that columns and rows may not add exactly to the given column or row totals.
- The published counts will never differ by more than two counts.
