

Attachment to PQ 13183 (2006)

Presentations are one component (B) of the following formula which the Act requires the Ministry of Health to use for calculating the levy rate – page 66 of the draft consultation document *Preventing and Minimising Gambling Harm 2007-2010* refers:

$$\text{Levy rate} = \frac{((A \times W1) + (B \times W2)) \times C}{D}$$

B = customer presentations to problem gambling services that can be attributed to gambling in a sector divided by total customer presentations to problem gambling services in which a sector that is subject to the levy can be identified.
